Innovative SMU Provides Superior Performance and Rapid Measurement Results

Single view

Dual view

Roll view

The Keysight Technologies, Inc. B2900A Series of Precision Source/Measure Units are compact and cost-effective bench-top Source/Measure Units (SMUs) with the capability to source and measure both voltage and current. These capabilities make the B2900A Series ideal for a wide variety of IV (current versus voltage) measurement tasks that require both high resolution and accuracy.

The Keysight B2900A Series of SMUs provide best-in-class performance for a modest price. They have broad voltage (± 210 V) and current (± 3 A DC and ± 10.5 A pulsed) sourcing capability, excellent precision (minimum 10 fA/100 nV sourcing and measuring resolution) and possess a superior color LCD graphical user interface (GUI). In addition, several task-based viewing modes dramatically improve productivity for test, debug and characterization.

The Keysight B2900A Series offers unmatched measurement throughput and supports conventional SMU SCPI commands for easy test code migration. These features improve efficiency and lower the cost of ownership when integrating the SMUs into systems for production test.

The Keysight B2900A Series consists of four models, the B2901A, B2902A, B2911A and B2912A, differentiated through their available features (number of digits displayed, measurement resolution, minimum timing interval, supported viewing modes, etc.) and by the number of SMU channels (one or two) they contain. This makes it easy to select the exact price/performance point you require to meet your testing needs.

Feature	Benefit
Integrated 4-quadrant sourcing and measuring capabilities	Easily and accurately measure current and voltage using a single instrument without the need to manually change any connections
Measurement range: ± 210 V, ± 3 A (DC), ± 10.5 A (pulsed)	A single SMU product covers both high voltage and high current measurement needs, allowing for more standardization and simplifying inventory and support concerns.
Source and measurement resolution down to 10 fA and 100 nV	Can make low-level measurements using a low-cost bench-top SMU that were previously only possible using a more expensive semiconductor device analyzer.
User-friendly front panel GUI with 4.3 inch color LCD display supports both graphical and numerical view modes	Can quickly and easily perform measurements and display data on the front panel, thereby greatly speeding up interactive test, characterization and debug operations.
10 microsecond digitizing capability	Can capture low frequency phenomena in addition to DC characteristics.
Free PC-based control software	Can make measurements remotely from a PC without the need to program.
Supports both conventional and default SCPI commands	Conventional SCPI commands provide some compatibility with older SMU code (such as Keithley 2400 series) to minimize code conversion work. Default SCPI commands support advanced B2900A Series features.
Small form factor with USB2.0, LAN, GPIB and digital I/O interfaces	Easy integration into rack and stack systems.

The Best SMU Solution for a Broad Range of IV Measurements

Keysight B2900A Series Precision Source/Measure Unit

SMUs are popular and widespread instruments for performing IV measurements in many different fields and applications due to their integrated voltage and current sourcing and measurement capabilities. The Keysight B2900A Series provides superior performance and usability at a very reasonable price. In addition, the Keysight B2900A Series supports many functions to speed up production test and increase throughput. The versatile measurement capabilities of the B2900A Series SMUs make them an ideal choice for a variety of IV measurements such as semiconductor test, active/passive component test and general electronic device and material characterization.

The B2900A Series has a broad application range that spans uses from R&D and education to industrial development, production test and automated manufacturing. Moreover, they work equally well as either standalone or system components.

Testing semiconductors, discrete and passive components

- Diodes, laser diodes, LEDs
- Photodetectors, sensors
- Field effect transistors (FETs), bipolar junction transistors (BJTs)
- ICs (analog ICs, RFICs, MMICs, etc)
- Resistor, varistor, thermistors, switches

Testing precision electronics and green energy devices

- Photovoltaic cells
- Power transistors, power devices
- Battery
- Automotive
- Medical instruments
- Power and DC bias source for circuit test

Research and education

- New material investigations
- Nano devices characterization (e.g. CNT)
- Giant magnetic resistance (GMR)
- Organic devices
- Any precise voltage/current source and measurement

Application literature is available on the Keysight web site. For more information please visit www.keysight.com/find/precisionSMU

Integrated Source and Measurement Capabilities Simplify Difficult IV Measurement Tasks

The Keysight B2900A Series reduces measurement complexity

Performing IV measurements with conventional instruments such as voltage/current sources, arbitrary waveform generators (AWGs), switches, and voltage/current meters is complicated and confusing. It requires deep technical knowledge of both the measurement technique and the instrumentation to perform an accurate measurement.

The Keysight B2900A SMU integrates many different source and measurement capabilities into one compact form factor. It can operate as a seamless 4-quadrant precision voltage/current

source, an electrical load, an accurate voltage/current meter, a pulse generator and an AWG. Its versatile all-in-one integrated source and measurement capabilities allow it to perform a wide variety of measurements from DC to low frequency AC without the need to change connections or use additional equipment. Moreover, the availability of 2-channel models supports the testing of devices with up to three terminals (as long as one terminal can be tied to the circuit common).

If you wish to learn more about the advantages of using SMUs to make IV measurements, then please refer to the section at the back of this brochure entitled “Overview: Why use an SMU?”

Rack & stack solution:
Multiple instruments connected together with no easy means to coordinate them.

Same measurement using an SMU

SMU solution:
Integrated 4-quadrant voltage and current sourcing and measurement (including AWG function).

Wide Voltage and Current Coverage for Testing a Variety of Devices

Test up to 210 V and 3 A (DC) or 10.5 A (pulsed) with a single instrument

The B2900A SMUs can source and measure voltages of ± 210 V and currents of ± 3 A (DC) or ± 10.5 A (pulsed). This versatility allows you to standardize on a single SMU model and minimize support costs. These capabilities are present on both single and dual channel versions, since on the 2-channel versions both channels can be operated completely independently.

Integrated sweep and arbitrary waveform measurement functionality

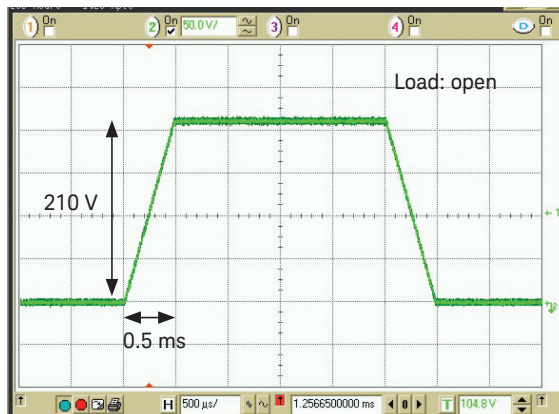

The Keysight B2900A Series has capabilities that allow it to perform more than just simple DC and pulsed measurements. The B2900A SMUs have a built-in sweep capability that supports all of the standard sweep parameters such as linear and logarithmic modes, single and double sweep functions and constant and pulsed sweep operation. The B2900A GUI fully supports the

sweep measurement function, thereby allowing sweep measurements to be made and displayed quickly from the instrument front panel. Of course, the user can also make the same sweep measurements just as efficiently on the B2900A SMUs under remote control using SCPI commands. This integrated sweep measurement capability improves efficiency and reduces measurement setup time.

In addition to its resident sweep functionality, the Keysight B2900A Series also supports arbitrary waveform generation (AWG) and list sweep capabilities. The AWG and list sweep functions allow you to create waveforms with up to 2500 steps for maximum flexibility, and enable you to specify a waveform of arbitrary shape using familiar spreadsheet compatible data-entry formats. The AWG and list sweep features are especially useful when characterizing devices where the response varies greatly depending upon the applied voltage or current, since they give you the flexibility to “zoom in” on areas of interest.

You can create current pulses of up to 10.5 amps, which helps to minimize device self-heating effects.

You can ramp up to a voltage of 200 V in 0.5 millisecond, which is useful for evaluating high-power components.

Built-in functions provide flexible waveform generation capabilities

Unmatched Bench-top SMU Measurement Performance

Source and measurement resolution down to 10 fA and 100 nV

The Keysight B2900A Series consists of four models primarily differentiated by number of channels (one or two) and measurement and sourcing resolution. The B2901A (single channel) and B2902A (dual channel) versions possess 100 fA and 100 nV measurement resolution and 1 pA and 1 μ V sourcing resolution. The B2911A (single channel) and B2912A (dual channel) precision versions possess 10 fA and 100 nV of resolution for both measurement and sourcing. All members of the Keysight B2900A Series support popular banana jack style inputs for cost-effective and flexible connectivity; for low-current measurements below 1 nA, banana jack to triaxial adapters are available.

Capture transient phenomena effortlessly

The Keysight B2900A Series supports a high speed sampling measurement function that permits the capture and display of low frequency transient phenomena. The Keysight B2901A and B2902A support a 20 μ s (50,000 points/s) sampling rate and the Keysight B2911A and B2912A support a 10 μ s (100,000 points/s) sampling rate. Of course, the maximum achievable sampling rate depends on many factors including signal level, ambient noise and desired resolution.

You can make and display accurate low-current measurements directly on the B2900A front panel.

4-wire measurement capability permits accurate low resistance measurement

When measuring small resistances the innate cable resistance can create serious measurement error. To solve this, the Keysight B2900A Series supports a 4-wire (also known as a remote sense or Kelvin connection) measurement function. In the 4-wire scheme two of the connectors force current and the other two connectors measure voltage. Since the connectors measuring voltage do not have any current flowing through them, they can accurately sense the actual voltage at the DUT.

Measure large capacitive loads without oscillation

Large capacitive loads can sometimes cause SMUs to oscillate. To mitigate this, the B2900A Series supports a high capacitance measurement mode. The high capacitance mode enables the measurement of large capacitive loads without having to worry about SMU oscillation.

Roll view mode allows you to capture low-frequency transient phenomena.

Ultra Fast Throughput Lowers Cost-of-test

Best-in-class measurement throughput

Although an excellent R&D tool, the Keysight B2900A Series is also well-suited for production test. It can achieve excellent accuracy and repeatability at even short integration times. The B2900A Series possesses the fastest measurement speed of any SMU in its class.

Program memory and trace buffer features improve throughput

To reduce bus communication time, the B2900A Series supports a program memory feature that allows long strings of SCPI commands to be stored on the instrument. These code sequences can be executed by sending a single command across the communication bus, greatly improving throughput for frequently executed command strings. In addition, the B2900A Series supports a trace buffer that can store up to 100,000 data points. This allows the results from multiple measurements to be downloaded at once, thereby reducing data transfer time and also improving overall throughput.

SCPI commands provide compatibility and versatility

Standard Commands for Programmable Instruments (SCPI) are a popular and easy-to-understand instrument control protocol. The Keysight B2900A Series supports two SCPI command sets, conventional and default, to provide both code compatibility and flexibility. The conventional command set has a large number of its commands compatible with those of older SMUs (such as the Keithley 2400) to minimize code conversion work. The default command set supports advanced Keysight B2900A Series features and they should be used to fully utilize its performance and capabilities.

Overview: Why Use an SMU?

Resource integration reduces measurement error

An SMU is an instrument that combines the capabilities of a current source, a voltage source, a current meter and a voltage meter (along with the capability to switch easily between these various functions). Because the source and measurement circuitry is closely integrated, the user can achieve far better measurement performance with less measurement error than would be possible by using various independent instruments to make the same measurement.

Feedback mechanism stabilizes voltage and current sourcing

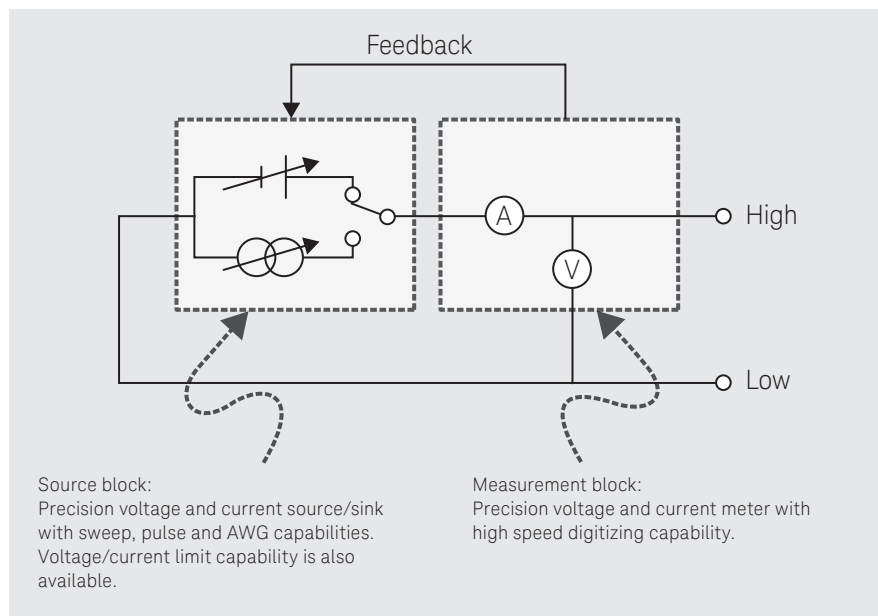

Since SMUs have the ability to very accurately measure their own current and voltage output, they have many advantages over conventional power supplies. All SMUs have internal feedback loops that provide instantaneous feedback to the sourcing circuitry, which in-turn allows the SMU output to remain accurate and stable even if the load conditions change unexpectedly.

Limit (compliance) feature prevents device damage

SMUs also possess a voltage and current limit (compliance) feature that allows the user to set limits and to protect devices from damage caused by excessive voltage or current. Although the SMU normally continues to function when it reaches the user-specified limit value, it can also be set to shutdown just like the over current protection (OCP) and over voltage protection (OVP) functions do on a power supply.

Accurate timing control of source and measurement resources

The integration of the source and measurement resources in an SMU allows much tighter synchronization than would be possible with separate instruments. Moreover, the B2900A Series provides very flexible triggering options that allow the measurements points to be defined independently from the sourced current or voltage waveform. On two channel units you can operate both channels in synchronization or independently, and under remote control you can trigger multiple units in unison using a group trigger signal.

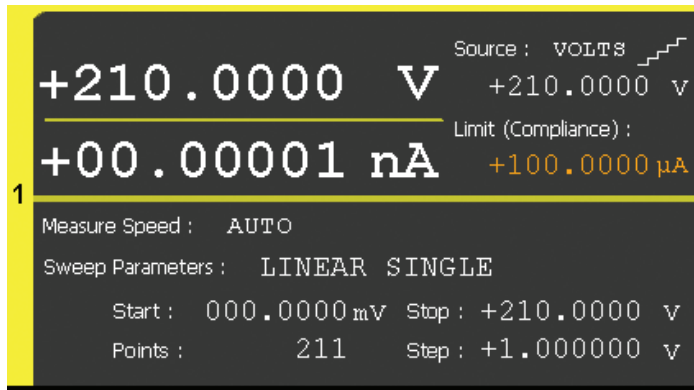

Simplified block diagram of the Keysight B2900A Series

Innovative GUI and 4.3" Color LCD Display Facilitate Fast Bench-top Test, Debug and Characterization

The B2900A's front panel has many features that make interactive use fast and friendly. These include a 4.3" color LCD display, a USB2.0 memory I/O port, an assist key, an alphanumeric keypad and a rotary knob. The 4.3" color LCD display supports both graphical and numerical view modes, and enables test setup and

check test results quickly. The USB2.0 memory port supports easy data storing and porting. The Innovative graphical user interfaces, such as single view, dual view, graph view, roll view and zoom, improves usability and productivity of bench-top tests, debug and characterizations dramatically.

Single view:

Single view provides basic and advanced settings and display capabilities for the selected channel from the front panel of the instrument. No additional controller or software is required.

Dual view:

Dual view provides the basic settings and display capabilities for both channels 1 and 2. Up to 6. digits can be displayed in dual view mode. This mode is available only for the B2902A/B2912A.

Graph view:

Graph View displays measurement results on XY graphs (such as I-V and I-t/V-t curves) on up to 2 channels. This is useful for quick evaluation of device characteristics, especially those obtained from sweep measurements.

Roll view:

Roll view draws I-t or V-t curves similar to the curves drawn by a strip chart recorder. Up to 1000 acquired data points can be displayed and updated while the measurement is still in progress. Roll view's continuous measurement capability is especially useful for monitoring low frequency phenomena. Roll view is available only for the B2911A/B2912A.

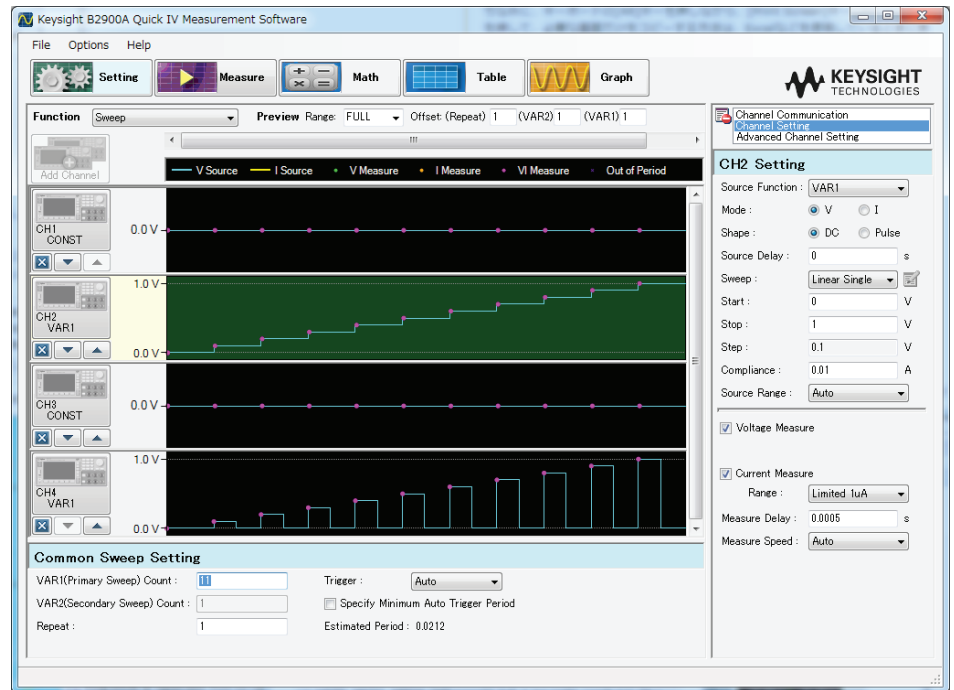

BenchVue

The screenshot displays the BenchVue software interface, which is used for configuring and testing electronic components. The interface is organized into several key sections:

- Top Menu Bar:** Contains navigation options: 'Bench', 'Apps', 'Data Manager', and 'Library'.
- Left Sidebar (Device Configuration):**
 - Header:** 'Power Supply // B2912A // USB0::2391::53272::MYS1140219:0::IN'.
 - Output Selection:** 'Output 1' and 'Output 2' tabs.
 - Mode:** A dropdown menu set to 'Current' with an 'Off' button.
 - Measure (V):** A text input field showing '0.000 V'.
 - Voltage Limit:** A text input field showing '1 V'.
 - Voltage Range:** A dropdown menu set to '210 V'.
 - Measure (I):** A text input field for current measurement.
 - Current Setting:** A text input field for current setting.
 - Current Range:** A text input field for current range.
 - Show Advanced Options:** A checkbox to toggle advanced settings.
 - Log Settings:** Checkboxes for 'Log voltage' (checked) and 'Log current'.
 - App State File:** A button to manage the application state file.
- Right Pane (BenchVue Test Flow):**
 - Workspace:** A tab for managing test sequences.
 - Results:** A tab for viewing test results.
 - Line Chart:** A graph showing 'X-Y Chart' (Current vs. Voltage). The y-axis represents current in milliamperes (mA) from -97 to 22.612. The x-axis represents voltage in millivolts (mV) from 0 to 4V. Multiple colored lines represent different test runs.
 - Table:** A table displaying test results for '1 - Get CH2 Current Measurement' and '1 - Sweep CH1 Current Setting'.
 - Last Saved Data:** A timestamp indicating the last save: 'SequenceDataLog 27-11-09 15:29:16'.
 - Repeat Sequence:** A button to repeat the test sequence.

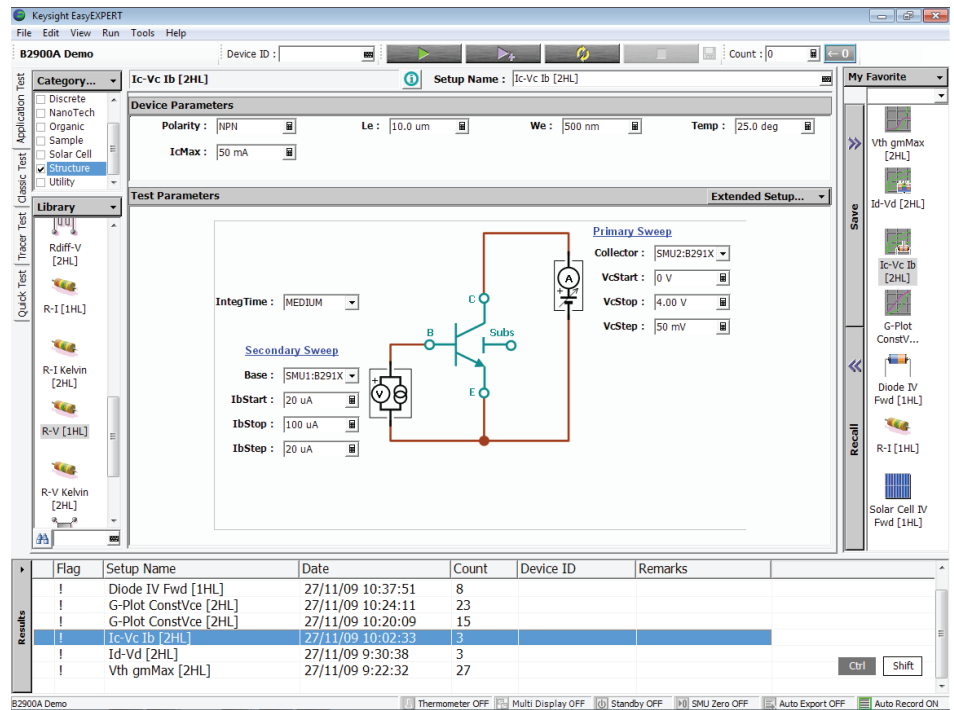

Quick I/V Measurement Software

Keysight B2900A Quick I/V Measurement Software permits easy measurement setup and execution on a Windows-based PC. It has a user-friendly GUI that can be used with all of the B2900A's interfaces (LAN, USB and GPIB). It can control up to four SMU channels in any configuration of single and dual channel units.

EasyEXPERTgroup+

Keysight EasyEXPERT group+ provides a powerful IV parametric characterization solution for a wide range of devices and materials. It has an intuitive mouse and keyboard driven graphical user interface that simplifies common characterization tasks such as test setup and execution, data analysis, data management/protection, etc. Moreover, since it can support up to eight SMU channels (four 2-channel SMU units) EasyEXPERT group+ makes it easy to characterize multi-terminal devices.

Available Accessories Facilitate Special Test Needs

Easy banana jack connectivity with various accessories

The Keysight B2900A uses convenient and low-cost banana jack terminals, which support a variety of cables, adaptors and accessories.

Banana to triaxial adaptor for low current measurement

Since banana jacks cannot support low current measurement (i.e. measurements of 1 nA and below), a banana jack to triaxial adapter is available to permit the use of high-performance triaxial cables. This makes it easy to connect to both triaxial-based test fixtures and wafer probers. Of course, both 2-wire and 4-wire triaxial adapters are available.

Test fixtures for testing packaged devices

The Keysight N1295A Device/Component Test Fixture provides a low-cost solution to quickly and easily test packaged devices and components. It has four triaxial inputs and supports voltage and current measurements of up to 42 V and 1 A.

For more advanced packaged testing needs, the Keysight 16442B test fixture provides more capabilities. It offers support for higher pin count devices, more flexible connectivity and an interlock feature for safely applying voltages greater than 42 V. Keysight can supply adapters to use the 16442B interlock with the B2900A's digital output.

The Keysight N1295A Device/Component Test Fixture provides a low-cost solution to quickly and easily test packaged devices and components.

Banana jack to triaxial adapters are available in both 2-wire and 4-wire versions.

Using the available accessories and furnished software you can create a low-cost PC-based component testing solution.

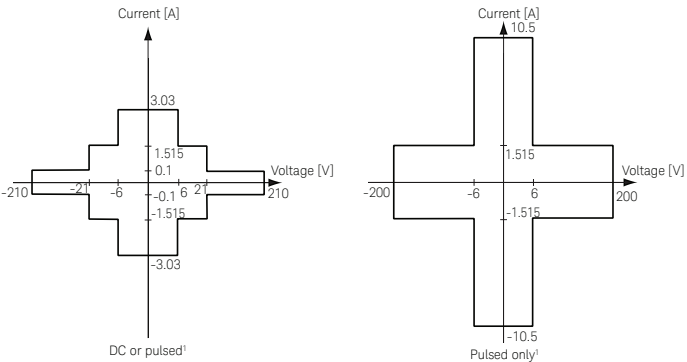

Specifications

Specification conditions

Temperature	23 °C ± 5 °C
Humidity	30% to 80% RH
After 60 minutes warm-up	Ambient temperature change less than ± 3 °C after self-calibration execution
Calibration period	1 year
Measurement speed	1 PLC (power line cycle)

Maximum voltage and current

	Max voltage	Max current
DC or pulsed ¹	210 V	0.105 A
	21 V	1.515 A ²
	6 V	3.03 A ²
Pulsed only ¹	200 V	1.515 A
	6 V	10.5 A

- 1. See “Maximum pulse width and duty cycle” in Pulse Source Supplemental Characteristics for applicable maximum voltage and current.
- 2. Max current limitation: For 21 V/1.515 A and 6 V/3.03 A ranges, total max current is limited by the table below for using 2 channels. Max current is not limited for using 1 channel only.

Maximum current limitation

Ch1 voltage	Ch2 voltage	Max total current limitation of Ch1 and Ch2
±(0 V < V ≤ 6 V)	±(0 V < V ≤ 6 V)	Ch1 current + Ch2 current ≤ 4 A
±(0 V < V ≤ 6 V)	±(6 V < V ≤ 21 V)	Ch1 current + Ch2 current x 1.6 ≤ 4 A
±(6 V < V ≤ 21 V)	±(0 V < V ≤ 6 V)	Ch1 current + Ch2 current x 0.625 ≤ 2.5 A
±(6 V < V ≤ 21 V)	±(6 V < V ≤ 21 V)	Ch1 current + Ch2 current ≤ 2.5 A

1. Supplemental characteristics
2. 10 nA range is not available for B2901A/B2902A.
3. 10 A range is available only for pulse mode, not available for DC mode.
4. Measurement speed: 0.01 PLC

Source supplemental characteristics

Temperature coefficient (0 to 18°C and 28 to 50°C)	± (0.1 x accuracy) /°C
Max output power and source/sink limits	31.8 W ±6 V @ ±3.03 A, ±21 V @ ±1.515 A, ±210 V @ ±105 mA, four quadrant source or sink operation
Current limit/compliance	Accuracy is same as current source. Minimum value is 1 % of range, or 1 nA in 10 nA range.
Voltage limit/compliance	Accuracy is same as voltage source. Minimum value is 1 % of range, or 20 mV in 200 mV range
Over range	101 % of source range for 1.5 A and 3 A ranges. 105 % of source range other than 1.5 A and 3 A ranges. No over range for 200 V range with current exceeding 105 mA pulse only condition.
Over temperature protection	Output turns off then resets at over temperature sensed internally
Voltage output settling time	Time required to reach within 0.1 % of final value at open load condition. Step is 10 % to 90 % range
200 mV, 2 V ranges	< 50 µs
20 V range	< 110 µs
200 V range	< 700 µs
Slew rate	≤ 0.36 V/µs, 20 V and 10 mA ranges, 10 MΩ load resistance
Current output settling time	Time required to reach within 0.1 % (0.3 % for 3 A range) of final value at short condition. Step is 10 % to 90 % range
10 nA, 100 nA ranges	< 10 ms
1 µA range	< 500 µs
10 µA, 100 µA ranges	< 250 µs
1 mA to 3 A ranges	< 80 µs
Noise 10 Hz to 20 MHz (V source)	3 mVrms, 20 V range
V source overshoot	< ±(0.1 % + 10 mV). Step is 10 % to 90 % range, resistive load
I source overshoot	< ±0.1 % (< ±0.3 % for 3 A range). Step is 10 % to 90 % range, resistive load
Voltage source range change overshoot	≤ 250 mV. 100 kΩ load, 20 MHz bandwidth
Current source range change overshoot	≤ 250 mV/R load, 20 MHz bandwidth

Pulse source supplemental characteristics

Minimum programmable pulse width	50 μ s
Pulse width programming resolution	1 μ s
Pulse width definition	The time from 10 % leading to 90 % trailing edge as follows

Maximum pulse width and duty cycle

	Pulsed			DC			
	Max voltage	Max peak current	Max base current	Pulse width	Max duty cycle	Max voltage	Max current
DC or pulsed	210 V	0.105 A	0.105 A	50 μ s to 99999.9 s	99.9999 %	210 V	0.105 A
	21 V	1.515 A ¹	1.515 A ¹	50 μ s to 99999.9 s	99.9999 %	21 V	1.515 A ¹
	6 V	3.03 A ¹	3.03 A ¹	50 μ s to 99999.9 s	99.9999 %	6 V	3.03 A ¹
Pulsed only	200 V	1.515 A	50 mA	50 μ s to 2.5 ms	2.5 %		
	180 V	1.05 A	50 mA	50 μ s to 10 ms	2.5 %		
	6 V	10.5 A	0.5 A	50 μ s to 1 ms	2.5 %		

1. Max current limitation: For 21 V/1.515 A and 6 V / 3.03 A ranges, total max current is limited by the table in page 12 for using 2 channels. Max current is not limited for using 1 channel only.

Minimum pulse width at the given voltage, current and settling conditions

Source value	Limit value	Load	Source settling (% of range)	Min pulse width
200 V	1.5 A	200 Ω	0.1%	1 ms
6 V	10.5 A	0.6 Ω	0.1%	0.2 ms
1.5 A	200 V	65 Ω	0.1%	2.5 ms
10.5 A	6 V	0.5 Ω	0.1%	0.2 ms

3. Measurement speed: 0.01 PLC

Measurement supplemental characteristics

Temperature coefficient (0 to 18°C and 28 to 50°C)	± (0.1 x accuracy) /°C					
Over range	102 % of measurement range for 1.5 A and 3 A ranges 106 % of measurement range other than 1.5 A and 3 A ranges					
Voltage measurement range change overshoot	< 250 mV. 100 kΩ load, 20 MHz bandwidth					
Current measurement range change overshoot	< 250 mV/R load, 20 MHz bandwidth					
Derating accuracy for measurement speed less than 1 PLC	Add % of range using the following table for measurement with PLC < 1					
Derating accuracy with PLC setting < 1 PLC						
	Voltage range		Current range			
	0.2 V	2 V to 200 V	10 nA	100 nA	1 µA to 100 mA	1 A to 3 A
0.1 PLC	0.01%	0.01%	0.1%	0.01%	0.01%	0.01%
0.01 PLC	0.05%	0.02%	1%	0.1%	0.05%	0.02%
0.001 PLC	0.5%	0.2%	5%	1%	0.5%	0.2%

Timer and triggering specification

Timer	Time stamp	TIMER value automatically saved when each measurement is triggered
	Trigger timing resolution	1 μ s to 100 ms
	Accuracy	± 50 ppm
	Arm/trigger delay	0 μ s to 100,000 s
	Arm/trigger interval	B2901A/B2902A : 20 μ s to 100,000 s B2911A/B2912A : 10 μ s to 100,000 s
	Arm/trigger event	1 to 100,000
Triggering ¹	Digital I/O Trigger in to trigger out	≤ 5 μ s
	Digital I/O Trigger in to source change	≤ 5 μ s
	LXI Trigger in to source change	Minimum 100 μ s, Typical 200 μ s, Maximum Unknown
	LXI Trigger in to measurement	Minimum 100 μ s, Typical 200 μ s, Maximum Unknown
	Internal event to external LXI trigger output	Minimum 100 μ s, Typical 200 μ s, Maximum Unknown
	LXI event send/receive latency	Unknown
	Minimum trigger interval	10 μ s

1. Supplemental characteristics

Other supplemental characteristics

Output characteristics	
Sensing Modes	2-wire or 4-wire (Remote-sensing) connections
Low terminal connection	Chassis grounded or floating
Output connectors	Banana jack. Triaxial connections are recommended for sourcing and measuring less than 1 nA. A banana jack to triaxial adapter is available for low current measurement.
Output location	Channel 1 at front, and channel 2 at rear
Maximum load	Normal mode: 0.01 μ F High Capacitance mode: 50 μ F
DC loading voltage	Max ± 250 V DC between low force and chassis ground
Guard offset voltage (V source)	< 4 mV
Remote sense operation range	Max voltage between High Force and High Sense = 3 V Max voltage between Low Force and Low Sense = 3 V
Common mode isolation	> 1 G Ω , < 4500 pF
Maximum sense lead resistance:	1 k Ω for rated accuracy
Sense input impedance	> 10 G Ω

High capacitance mode

The high capacitance mode permits the measurement of devices with capacitances greater than the normal mode maximum load value of 0.01 μF . In high capacitance mode the maximum allowed value of the load capacitance is 50 μF .

		Time required to reach within 0.1 % of final value with 4.7 μF capacitive load on a fixed range at specified current range and limit value	
Voltage output settling time	200 mV, 2 V ranges		600 μs , at 1 A limit
	20 V range		1.5 ms, at 1 A limit
	200 V range		20 ms, at 100 mA limit
		Time required to reach within 0.1 % of final value after voltage source is stabilized on fixed range. Vout is 5 V unless noted.	
Current measurement settling time	1 μA range		230 ms
	10 μA , 100 μA ranges		23 ms
	1 mA, 10 mA ranges		0.23 ms
	100 mA to 3 A ranges		100 μs
Mode change delay	Delay into high cap mode	1 μA range	230 ms
		10 μA , 100 μA ranges	23 ms
		1 mA to 3 A ranges	1 ms
	Delay out of high cap mode	All ranges	10 ms
Noise 10 Hz to 20 MHz (20 V range)		4.5 mVrms	
Voltage source range change overshoot (20 V range or below)		< 250 mV, 20 MHz bandwidth	
High Capacitance mode working conditions	V/I mode		Voltage source mode only
	Range		Current measurement range is limited to fixed range only. 10 nA and 100 nA ranges are not available.
Current limit		$\geq 1 \mu\text{A}$	

Other supplemental characteristics, continued

Resistance measurement

Resistance measurement can be performed under either auto or manual test conditions. Auto resistance measurement is performed in current source and voltage measurement mode. The total auto resistance measurement error is shown in the table below. The total error of a manual resistance measurement can be calculated using the voltage and current accuracy information as shown below.

Source I mode, manual ohm measurement (4-wire)	Total error = $V_{\text{meas}}/I_{\text{src}} = R$ reading \times (gain error % of V range + gain error % of I range + offset error of I range/ I_{src} value %) + (offset error of V range/ I_{src} value)
Source V mode, manual ohm measurement (4-wire)	Total error = $V_{\text{src}}/I_{\text{meas}} = 1/[1/R$ reading \times (gain error % of I range + gain error % of V range + offset error of V range/ V_{src} value %) + (offset error of I range/ V_{src} value)]
Measurement speed	1 PLC
Applicable for temperature	23 °C \pm 5 °C
Example of total error calculation	I source value = 1 mA at 1 mA range V measure range = 2 V range Total error (% reading + offset) = (0.02 % + 0.02 % + 200 nA/1 mA) + (350 μV /1 mA) = 0.06 % + 0.35 Ω

Typical performance of auto resistance measurement (4-wire), 2 V range

Range	Resolution	Test current	Current range	Total error (% reading + offset)
2 Ω	1 $\mu\Omega$	1 A	1 A	0.2 % + 0.00035 Ω
20 Ω	10 $\mu\Omega$	100 mA	100 mA	0.06 % + 0.0035 Ω
200 Ω	100 $\mu\Omega$	10 mA	10 mA	0.065 % + 0.035 Ω
2 k Ω	1 m Ω	1 mA	1 mA	0.06 % + 0.35 Ω
20 k Ω	10 m Ω	100 μ A	100 μ A	0.065 % + 3.5 Ω
200 k Ω	100 m Ω	10 μ A	10 μ A	0.06 % + 35 Ω
2 M Ω	1 Ω	1 μ A	1 μ A	0.095 % + 350 Ω
20 M Ω	10 Ω	100 nA	100 nA	0.18 % + 3.5 k Ω
200 M Ω	100 Ω	10 nA	100 nA	1.08 % + 35 k Ω

System speeds

Maximum sweep operation reading rates (reading/second) for 50 Hz

Measure speed	Measure to memory	Measure to GPIB	Source measure to memory	Source measure to GPIB
< 0.001 PLC	20000	12500	19500	12500
0.01 PLC	4500	3950	4500	3950
0.1 PLC	500	490	500	490
1 PLC	49	49	49	49

Operation reading rate varies by number of sweep steps. Number of sweep steps is specified.

Environmental specifications

Environment	For use in indoor facilities	
Operating	0 °C to +55 °C, 30 % to 80 % non-condensing	
Storage	-30 °C to 70 °C, 10 % to 90 % non-condensing	
Altitude	Operating: 0 m to 2000 m, Storage: 0 m to 4600 m	
Power supply	90 V to 264 V, 47 Hz to 63 Hz, 250 VA maximum	
EMC	IEC61326-1/EN61326-1, AS/NZS CISPR 11, KC: RRA Notification amending Radio Waves Act Article 58-2	
Safety	IEC61010-1/EN61010-1, CAN/CSA-C22.2 No. 61010-1-04, C/US	
Certifications	CE, cCSAus, C-Tick, KC	
Warm-up	1 hour	
Dimensions	Case	88 mm (2U) x 213 mm (half width) x 450 mm
	Working	180 mm x 260 mm x 480 mm (with handle & feet)
Weight	Net	5.0 kg (B2901A, B2911A), 6.4 kg (B2902A, B2912A)
	Shipping	9.0 kg (B2901A, B2902A, B2911A, B2912A)

Front panel operation	
Front panel interface	4.3" TFT color display (480x272, with LED backlight) with keypads and rotary knob
View mode	Single view, Dual view, Graph view and Roll view
Hardkeys	Single Trigger and Auto Trigger control, 10-key, Rotary Knob and Cursors, Channel on/off, View, Cancel/Local
Softkeys	Function, System and Input Assist Keys
Indicators	Channel (measurement) status, System status

Source/measurement capabilities

Sweep measurement	
Number of steps	1 to 2,500
Sweep mode	Linear, logarithmic (log) or list
Sweep direction	Single or double
Type	DC, or pulse
Min programmable value to create list sweep waveform	B2901A/B2902A: Min 20 μ s with 1 μ s resolution B2911A/B2912A: Min 10 μ s with 1 μ s resolution

Digitizing/sampling measurement	
Min trigger interval (Max speed of measurement)	B2901A/B2902A: 20 μ s (50,000 points/s) B2911A/B2912A: 10 μ s (100,000 points/s)

Data buffers	
Max buffer size	100,000 points / channel

Input/Output connectivity		
GP-IB		IEEE-488.2
Ethernet		100BASE-T / 10BASE-T
USB		USB 2.0 host controller (front) USB 2.0 device interface (rear)
Digital I/O	Connector type	25-pin female D.
	Input/output pins	14 open drain I/O bits
	Absolute max input voltage	5.25 V
	Absolute min input voltage	- 0.25 V
	Max logic L input voltage	0.8 V
	Min logic H input voltage	2.0 V
	Max source current	1 mA @ Vout = 0 V
	Max sink current	50 mA @ Vout = 5 V
	5 V power supply pin	Limited to 500 mA, solid state fuse protected
	Safety interlock pin:	One active high pin and one active low pin. Activation of both pin enables output voltage > 42 V
Maximum number of simultaneously triggered units (using Digital I/O) ¹ :		8

1. Supplemental characteristic

Program, software and drivers	
Programming	SCPI
Program memory	100 kB (2500 lines typical)
LXI compliance	LXI Core 2011
Software available	EasyEXPERT group+, Quick I/V Measurement Software, Graphical Web Interface, BenchVue
Drivers available	IVI-C, IVI-COM drivers, LabVIEW drivers

Software prerequisites		
EasyEXPERTgroup+	Operating system	Microsoft Windows Vista Business SP2 or later (32bit), Microsoft Windows 7 Professional SP1 or later (32bit/64bit), Microsoft Windows 8.1 Professional or later (32bit/64bit)
	Supporting language	English (US)
	.NET Framework	Microsoft .NET, Framework 3.5 SP1
	IO Libraries	Keysight IO Libraries Suite 16.2, 16.3, 17.1 update 1 or later (for the Online execution mode)
	Memory	2 GB memory
	Display	XGA 1024 x 768 (SXGA 1280 x 1024 recommended)
	HDD	Installation: 1GB free disk space on the C drive, Test setup/result data storage: Free disk space more than 30GB is recommended
	Recommended GPIB I/F	Keysight 82350B/C (PCI) ¹ , 82351B(PCIe) ¹ , 82357A (USB) ^{2,3} , 82357B (USB) ^{2,3} National Instrument: GPIB-USB-HS (USB) ^{2,1}
Quick IV	Operating system	Windows 7 (64 bit/32 bit)
	Supporting language	English (US)
	.NET Framework	Microsoft .NET, Framework 4.0 or later
	IO Libraries	16.0 or later
	Interfaces	USB, GP-IB, LAN
BenchVue	Operating system	Windows 10 32-bit and 64-bit (Professional, Enterprise, Education, Home versions) Windows 8 32-bit and 64-bit (Professional, Enterprise, Core) Windows 7 SP1 and later 32-bit and 64-bit (Professional, Enterprise, Ultimate, Home Basic, Home Premium)
	HDD	Processor: 1 GHz or faster (2 GHz or greater recommended) RAM: 1 GB (32-bit) or 2 GB (64-bit) (3 GB or greater recommended)
	Display resolution	1024 x 768 minimum for single instrument view (higher resolutions are recommended for multiple instrument view)
	Interfaces	USB, GPIB, LAN, RS-232

1. A PCI or PCIe card is highly recommended because of stability and speed.
2. USB GPIB interfaces might cause serial poll error intermittently due to the intrinsic communication scheme differences. It is reported that using an even GPIB address sometimes significantly decreases the chance of the error. The NI GPIB-USB-HS is recommended for stability, and the Keysight 82357x is recommended for speed.
3. EasyEXPERT software prohibits to set the odd GPIB address to prevent the issue above.

Keysight B2900A family

The B2900A series is a member of B2900 Precision Instrument Family, which provide a variety of precision measurement solutions with both sourcing and measurement capabilities. The B2960A series of Low Noise Power Sources have up to 6.5-digit voltage/current sourcing resolution and a 10 μ Vrms noise floor. The B2980A series of picoammeter/electrometer have down to 0.01fA and up to 10 $\text{P}\Omega$. Further information on the B2900 Precision Instrument Family is available at <http://www.keysight.com/find/b2900a>.

B2960A Low Noise Power Source

B2980A Picoammeter and Electrometer/High R meter

Furnished Accessories

Power cable, USB cable, Quick Reference (English), CD-ROMs (including PDF manuals, Quick I/V Measurement Software and drivers, EasyEXPERT group+ install media), Keysight I/O Library Suite

Ordering Information

Model number	
B2901A	Precision Source/Measure Unit, 1ch, 100 fA, 210 V, 3 A DC/10.5 A pulse
B2902A	Precision Source/Measure Unit, 2ch, 100 fA, 210 V, 3 A DC/10.5 A pulse
B2911A	Precision Source/Measure Unit, 1ch, 10 fA, 210 V, 3 A DC/10.5 A pulse

A personalized view into the information most relevant to you.

Three-Year Warranty

www.keysight.com/find/ThreeYearWarranty

Keysight's committed to superior product quality and lower total cost of ownership. Keysight is the only test and measurement company with three-year warranty standard on all instruments, worldwide. And, we provide a one-year warranty on many accessories, calibration devices, systems and custom products.

Keysight Assurance Plans

www.keysight.com/find/AssurancePlans

Up to ten years of protection and no budgetary surprises to ensure your instruments are operating to specification, so you can rely on accurate measurements.

Keysight Infoline
