# FTBx-750C Metro/Long-Haul OTDR

LONG-DISTANCE FIBER CHARACTERIZATION AND FIBER UPGRADES

Feature(s) of this product is/are protected by one or more of: US design patent D798,171 and equivalent(s) in other countries; and US design patent D842,144; US patent 8,576,389 and equivalent patents pending and/or granted in other countries; US patent 9,170,173; US patent 9,571,186; US patent 10,014,935; US patent 9,134,197 and equivalent patents pending and/or granted in other countries; and US 9,506,838.

High dynamic range combined with high resolution for highly accurate fiber characterization.

# **KEY FEATURES**

Dynamic range of up to 46 dB

Event dead zone of 0.5 m and attenuation dead zone of 2.5 m

Up to 256 000 sampling points

EXFO Connect-compatible: automated asset management; data goes through the cloud and into a dynamic database

# **APPLICATIONS**

Metro network testing

Long-haul network testing

Manufacturing automation

#### LOADED WITH FEATURES TO BOOST YOUR EFFICIENCY

#### Real-Time Averaging

Activates the OTDR laser in continuous shooting mode, the trace refreshes in real time and allows to monitor the fiber for a sudden change. Perfect for a quick overview of the fiber under test.

#### Automode

Used as a discovery mode, this feature automatically adjusts the distance range and the pulse width in function of the link under test. It is recommended to adjust the parameters to perform additional measurements to locate other events.

#### Zoom Tools

Zoom and center to facilitate the analysis of your fibers. Draw a window around the area of interest and center in the screen quicker.

#### Set Parameters On The Fly

Dynamically change OTDR settings for the ongoing acquisition without stopping or returning to submenus.

#### Macrobend Finder

This built-in feature enables the unit to automatically locate and identify macrobends, no need to spend further time analyzing the traces.

#### Bidirectional Analysis (Via FastReporter 2 Data Post-Processing Software)

Recommended to ensure true splice characterization, bidirectional analysis combines results from both directions to provide an average loss for each event. For a more complete event characterization, use intelligent Optical Link Mapper (iOLM) and benefit from maximum resolution on both directions (multiple pulse widths at multiple wavelengths) as well as a consolidated view.

## LOOKING FOR ICON-BASED MAPPING?

## Linear View (Included on All EXFO OTDRs)

Available on our OTDRs since 2006, the linear view simplifies the reading of an OTDR trace by displaying icons in a linear way for each wavelength. This view converts the graph data points obtained from a traditional single pulse trace into reflective or non-reflective icons. With applied pass/fail thresholds, it becomes easier to pinpoint faults on your link.

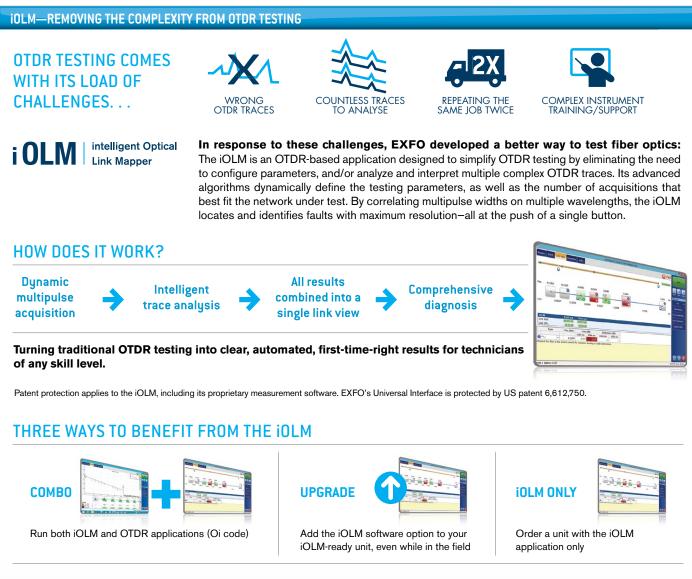

This improved version of linear view provides the flexibility to display both the OTDR graph and its linear view without having to toggle to analyze your fiber link.

Although this linear view simplifies the OTDR reading of a single pulse width's trace, the user will still need to set the OTDR parameters. In addition, multiple traces must often be performed in order to fully characterize the fiber links. See the section below to learn how the iOLM can perform this automatically and with more accurate results.

## **IOLM FEATURES VALUE PACK**

FastReporter

In addition to the standard iOLM feature set, you can select added-value features as part of the **Advanced** or **Pro** packages. Please refer to the iOLM specification sheet for the complete and most recent description of these value packs.

## GET THE BEST OUT OF YOUR DATA POST-PROCESSING

## **ONE SOFTWARE DOES IT ALL**

This powerful reporting software is the perfect complement to your OTDR, and can be used to create and customize reports to fully address your needs.

#### FIBER CONNECTOR INSPECTION AND CERTIFICATION-THE ESSENTIAL FIRST STEP BEFORE ANY OTDR TESTING

Taking the time to properly inspect a fiber-optic connector using an EXFO fiber inspection probe can prevent a host of issues from arising further down the line, thus saving you time, money and trouble. Moreover, using a fully automated solution with autofocus capabilities will turn this critical inspection phase into a fast and hassle-free one-step process.

## DID YOU KNOW THAT THE CONNECTOR OF YOUR OTDR/IOLM IS ALSO CRITICAL?

The presence of a dirty connector at an OTDR port or launch cable can negatively impact your test results, and even cause permanent damage during mating. Therefore, it is critical to regularly inspect these connectors to ensure that they are free of any contamination. Making inspection the first step of your OTDR best practices will maximize the performances of your OTDR and your efficiency.

## SOFTWARE TEST TOOLS

This series of platform-based software testing tools enhance the value of the FTB-2, FTB-2 Pro and FTB-4 Pro platforms, providing additional testing capabilities without the need for additional modules or units.

EXpert TEST TOOLS	
EXpert VolP TEST TOOLS	EXpert VoIP generates a voice-over-IP call directly from the test platform to validate performance during service turn-up and troubleshooting. > Supports a wide range of signaling protocols, including SIP, SCCP, H.248/Megaco and H.323 > Supports MOS and R-factor quality metrics > Simplifies testing with configurable pass/fail thresholds and RTP metrics
EXpert IP TEST TOOLS	EXpert IP integrates six commonly used datacom test tools into one platform-based application to ensure that field technicians are prepared for a wide range of testing needs. > Rapidly performs debugging sequences with VLAN scan and LAN discovery > Validates end-to-end ping and traceroute > Verifies FTP performance and HTTP availability
EXpert IPTV TEST TOOLS	This powerful IPTV quality assessment solution enables set-top-box emulation and passive monitoring of IPTV streams, allowing quick and easy pass/fail verification of IPTV installations. > Real-time video preview > Analyzes up to 10 video streams > Comprehensive QoS and QoE metrics including MOS score

#### AUTOMATE ASSET MANAGEMENT. PUSH TEST DATA IN THE CLOUD. GET CONNECTED.

EXF0 Connect

EXFO Connect pushes and stores test equipment and test-data content automatically in the cloud, allowing you to streamline test operation from build-out to maintenance.

#### **REMOTE CONTROL AND MEASUREMENT AUTOMATION**

SCPI commands available for OTDR measurements. With FTB-2, FTB-2 Pro and FTB-4 Pro: GPIB (IEEE 488.1, IEEE 488.2) or Ethernet.

#### All specifications valid at 23 °C $\pm$ 2 °C with an FC/APC connector, unless otherwise specified.

#### Note

a. Please refer to the iOLM specification sheet for the complete and most recent description of these value packs.

## EI CONNECTORS To maximize the performance of your OTDR, EXFO recommends using APC connectors on singlemode port. These connectors generate lower reflectance, which is a critical parameter that affects performance, particularly in dead zones. APC connectors provide better performance than UPC connectors, thereby improving testing efficiency. For best results, APC connectors are mandatory with the iOLM application. Note: UPC connectors are also available. Simply replace EA-XX by EI-XX in the ordering part number. Additional connector available: EI-EUI-90 (UPC/ST).
