

The New 2210 Bottle Neck Clamp

MODEL 2210 BOTTLE NECK CLAMP

The 2210 Bottle Neck Clamp is for securing bottles at the *neck collar*. This new design eliminates the compression and deformation of bottles, especially with new thin walled type bottles, where typically a clamping force is applied to the sides or shoulder of the bottle.

This new method of securing the bottle provides improved gripping strength at the neck collar, its most rigid point. Added benefits of this new clamp include:

- 1. Improved alignment and repeatability*
- 2. Elimination of adapter petaloid base plates*
- 3. Shortened bottle install / removal time*
- 4. Use with **any** Vibrac cap torque test system*

After performing trials with the new clamp, a QC Manager referred to the device as a “great improvement,” “faster and easier to use,” “provides more consistent testing,” and “removes most of the human error.”

OTHER INFO

- Vibrac 2210 Bottle Neck Clamp includes one set of Jaws
- Neck jaws available for cap size 26mm / 28mm / 30mm / 38mm

**Please contact Vibrac directly with any questions.*
