

Automatic Rice Husker
Model TR-260

20 grams in 60 seconds.

Automatic Rice Husker **Model TR-260**

TR-260 is an automatic electric rice husker for making brown rice samples for measurement with grain moisture meters.

To start husking, pour paddy in the paddy inlet, close the cover, and press the start key. The husk and brown rice are separated and collected in the individual trays. Only brown rice samples for moisture measurement can easily be collected.

TR-260 is equipped with the inlet cover so that paddy samples do not jump out.

Approximately 20g sample can be processed at a time.

TR-260 is serviceable to improve moisture measurement efficiency at agricultural facilities such as rice centers and country elevators that require a lot of moisture measurement.
