**Caution** Do not connect the model to signals or use for measurements within Measurement Categories II, III, or IV.

**Attention** Ne connectez pas le modèle à des signaux et ne l'utilisez pas pour effectuer des mesures dans les catégories de mesure II, III ou IV.

Measurement Category I is for measurements performed on circuits not directly connected to the electrical distribution system referred to as *MAINS* voltage. *MAINS* is a hazardous live electrical supply system that powers equipment. This category is for measurements of voltages from specially protected secondary circuits. Such voltage measurements include signal levels, special equipment, limited-energy parts of equipment, circuits powered by regulated low-voltage sources, and electronics.

## Environmental Guidelines

**Notice** This model is intended for use in indoor applications only.

**Notice** The OEM Kit may require a heat sink or air flow to remain within the maximum allowed temperature ranges. You can mount the Thermal Kit for CompactRIO Single Board Controller with NI-DAQmx heat spreader on the NI sbRIO model.

**Notice** The Development Kit must be used with the Thermal Kit for CompactRIO Single Board Controller with NI-DAQmx.

**Notice** The model's thermal performance is greatly influenced by several factors, including resource utilization, mounting, and adjacent power dissipation. These factors can substantially affect the achievable external ambient temperature at which the maximum local and reported temperatures are reached. NI recommends you validate your system to ensure local and reported temperatures remain within maximum allowed temperature ranges. In some applications, additional thermal design may be necessary.

- Notice** Exercise caution when designing an enclosure for the model. Auxiliary cooling may be necessary to keep the model within the specified operating temperature range.
- Notice** For information about and examples of environmental and design factors that can affect the thermal performance of NI sbRIO systems, visit [ni.com/r/sbriocooling](https://ni.com/r/sbriocooling).
- Notice** For model-specific guidelines about enabling proper thermal design, refer to the *CompactRIO Single Board Controller with DAQmx Hardware Installation Manual* on [ni.com/manuals](https://ni.com/manuals).

## Local Ambient Temperature

Local ambient temperature is the temperature measured directly adjacent to the model.

- Note** Operating temperature refers to the temperature of the room, environment, or enclosure in which an sbRIO-9609 is installed. The maximum operating temperature allowable for sbRIO-9609 is determined by the monitored battery temperature. Refer to the device *Safety, Environmental, and Regulatory Information* document on [ni.com/manuals](https://ni.com/manuals) for more information.
- Note** For more information about designing a thermal solution, validating temperature, and measuring both local ambient temperature and operating temperature, refer to the *CompactRIO Single-Board Controller with NI-DAQmx Hardware Installation Manual* on [ni.com/manuals](https://ni.com/manuals).
