

The power to know, react and understand

Data collected by Aquamonitrix[®] can be transmitted by Wireless IoT via a cellular module to the Datamonitrix dedicated data management system. Datamonitrix is a secure, password-protected platform for storing, managing and analysing your nitrate and nitrite data. It can be accessed directly from your PC.

Key Parameters Logged

- Time
- NO₂ concentration (and % confidence of reading)
- NO₃ concentration (and % confidence of reading)

Remote Control Capabilities

Send instructions to:

- Re-boot a sensor
- Change duty cycle or trigger a manual run

Customisable Interface

- Secure login
- Add/remove team members and assign access levels
- Create email distribution lists to receive warnings and service notices
- Configure and manage assets on a territory, plant and sensor level
- Set defaults and configure alarms

Data Analysis & Interpretation

- Get at-a-glance live data from your home page
- Use dashboard tools to present readings with compelling visualisations
- Drill down to view logs, alarms and maintenance reports

Maintenance Portal

- View maintenance/servicing history
- Receive automatically generated emails when servicing/maintenance is required
- View unit health diagnostics and troubleshooting parameters

Real-time | Accurate | Simple
