Introduction

ORing's smart lighting series managed wireless transporting is designed for street lamp. Through NB IoT communication technology (LPWAN), it is achieved to use licensed wireless frequencies and communicate devices more economic, more energy saving, and safer appliance.

OL-B-NB series provides electrical parameters monitoring function- Vrms(V), Irms(I), Power Factor(PF), Frequency(Hz), Power(W) to do instant monitoring and controls its cell controller operating. According to above monitored parameters calculation, it also obtains fault detection information – Over/under voltage, Over/under current, Lamp/Driver fault, Device failure to help users get on proper debug procedure.

OL-B-NB series also include the G-Sensor to do the tilt detection, can send the alarm in any damage, and so on.
