

Transparency Tester

TM-1 Transparency tester is the latest development production of our company, which is the requisite instrument in detecting transparency of gelatin. Identified by the national quality superintendent department, the technical specifications of this tester reached or surpassed the advanced level of this kind of instrument in the world.

TM-1

Features:

- All operations are controlled by MPU. The tester has a high reliable performance and its measurement result has a high accuracy.
- Automatically calculates the transparency by using a standard test tube and precise photoelectric transducers.
- About all components are selected in the imported or high quality ones.
- It can be operated conveniently by using keys. Its measurement results are displayed by LED.
- Simple and direct constructions have made its outward appearance pleasing to the eyes.

Appliance Standard:

- National standard (Food additive Gelatin) GB6783-94
- Vocation standard (Gelatin for medicine) QB2354-98

| Technical Data | TM-1 |
|----------------|---------------|
| Test Range | 20 ~ 500mm |
| Test Accuracy | +/-5mm |
| Volume | 400mL |
| Power | 110V 60Hz 80W |
| Dimension | 360×240×120mm |
| Weight | 3KG |
