PRO PC-Series®

Programmable Laboratory and Industrial Homogenizers

Responding to a need for homogenizers that can run repetitive batch processing with a minimum of operator attention, PRO developed the computer-interfaced PRO PC-Series®.

The PRO300PC and PRO400PC are programmed either from the unit's touchpad or from your own laptop or desktop computer (serial communication modes RS232) with the included PROgrammable® software. An infinite number of programs can be created and stored, each consisting of up to 23 unique cycles defining speed, run time and pause between each cycle. At any point a PC-Series homogenizer can be overridden and manual control resumed.

PRO PC-Series homogenizers meet industry requirements for verification of processing and documentation maintenance. As homogenization proceeds, data can be graphed on the computer screen. Both the programs and the data collected (set time and set speed versus actual time and actual speed) can be stored and recalled for screen display or printout.

For further specifications refer to the D-Series descriptions on page 5. Refer to pages 7 to 10 for available generators and assemblies.
