

imc SPARTAN

Compact measurement systems for measuring voltage, current, temperature and bridges

imc SPARTAN-N is a family of compact measurement instruments with 21 to 128 channels. Depending on the actual system configuration, that needs to be selected upon order, the devices will be equipped ex-factory with certain modules (T16, U16, B16, BCF16, LVDT16) that enable precise measurements of voltage, current (20 mA), temperature (thermocouples and PT100 and bridge (DC and CF mode) as well as LVDT.

The basic standard configuration of all imc SPARTAN instruments always includes 16 digital inputs, 8 digital outputs, 4 incremental counter for the measurement of RPM, velocity or displacement, or for direct counting of pulses.

Furthermore individual expansions are interfaces for fieldbus systems from the automotive, avionics, railway engineering, industrial automation sector (e.g. CAN FD, FlexRay, XCPoE, ARINC, MVB, EtherCAT).

Conditioners

For isolated measurements of voltage and temperature, the two modules **T16** and **U16** are available, which differ in the maximum sampling rates they provide. The measurement inputs of these SPARTAN modules can be ordered as standard DSUB-15 (voltage and temperature) or thermocouple connectors (TC temperature mode only).

For measurement of bridges and strain gauge, the **B16** modules (with DSUB-15) are available. These modules are also available as C-variant ("compact"), equipped with High-Density DSUB-26-HD connectors and therefore only half as wide as B16 (C-variants do not support TEDS technology).

Another bridge module, **BCF16**, additionally supports, beside the DC mode, the carrier frequency (CF) and allow measurements of bridges and strain gauge and also LVDT type transducers such as inductive displacement sensors.

Finally, the inexpensive **LVDT16** conditioning module is specially designed for LVDT measurements (Schaevitz coils according to the transformer principle and inductive half bridges) and is also available in a compact DSUB-26-HD version (LVDT16).

Configuration

The imc SPARTAN measurement instruments work either in conjunction with a PC or in stand-alone mode with UPS (uninterruptable power supply) and auto-start mode. Upon a short term power outage the device will operated from its integrated UPS. As this power failure persists, a running measurement will automatically be stopped, data files saved and shutdown procedure initiated.

The optional imc Online FAMOS platform allows arbitrary realtime processing, data analysis and control functionality directly embedded into the device. Based on signal processor technology it guarantees predictable realtime response and allows the implementation of realtime test automation. It doesn't require programming skills but is easily configurable by simple formula editing.

The associated operating software imc STUDIO is an integrated package that accesses very versatile functionalities. It not only serves as an interactive operating system but is also capable to realize comprehensive solutions from lab test to mobile data logging and up to complete industrial test rigs.

Modules for imc SPARTAN-N

So-called conditioner modules can be individually combined: At time of order the customer may select his desired configuration that will be build as a fixed system configuration ex-factory. That includes:

- analog measurement amplifier
- analog outputs
- digital inputs and outputs
- pulse counter unit (incremental counter inputs)

Furthermore, **fieldbus modules** can be provided as fixed options when ordering the device. In addition to vehicle and industrial buses, this also includes an application-specific programmable interface module (APPMOD). It allows custom specific solutions for connecting devices, telemetry and protocols via Ethernet or serial interfaces.

Fieldbus modules usually occupy one device slot, corresponding to half a SPARTAN module socket. The first (e. g. CAN FD Interface) can be installed in a slot reserved exclusively for this purpose. All others then occupy the slots for conditioning modules accordingly. In any case, the maximum number is limited to 7 fieldbus modules. Further information and technical data are contained in separate data sheets.

1 standard module (e.g. U16) = 1 SPARTAN socket = 2 slots = 2 x 20.32 mm = 40.64 mm = 8 HP
1 fieldbus module (e.g. CAN) = 1/2 SPARTAN socket = 1 slots = 1 x 20.32 mm = 20.32 mm = 4 HP

A distinction is made between module versions for the SPARTAN housing and SPARTAN rack ("-R"), which differ slightly from the front panel.

An integrated **sensor supply module** with selectable supply voltages is available as an extension for the U16 and T16 modules (with DSUB-15 sockets) and does not require an additional slot.

Digital modules

imc SPARTAN devices are already equipped as standard with 16 digital inputs, 8 digital outputs and 4 pulse counter inputs for incremental encoders.

For the module (DI16-DO8-ENC4) one socket (2 slots) has already been reserved, it is not included in the number of freely assignable slots. Additional units of this module can also be configured in free slots, as well as additional modules with digital inputs (DI), digital outputs (DO) and analog outputs (DAC).

The technical specs listed below apply in general, the respective number of bits or channels depends on the specific module type.
