## Mini CO<sub>2</sub> Submersible pCO<sub>2</sub> Sensor

The Mini CO<sub>2</sub><sup>TM</sup> instrument uses infrared detection to measure the partial pressure of CO<sub>2</sub> gas dissolved in liquids. With pCO<sub>2</sub> ranges from 0-1000 ppm up to 0-100%, the Mini CO<sub>2</sub> provides the versatility needed for any application.

Mini CO<sub>2</sub><sup>TM</sup> submersible instruments are compact, lightweight, plug and play sensors. The instrument also measures total dissolved gas pressure (TDGP), a useful parameter for many applications and data correction.

With housing options rated to 6000 dbar of hydrostatic pressure, and resistance to most corrosive liquids, the Mini CO<sub>2</sub> can provide reliable dissolved carbon dioxide data for many applications. Flow-through and in-line adapters are also available for simple and effective industrial solutions.

For specialized applications, Pro-Oceanus can provide custom solutions to suit any need.
